Subject: What's in your food?

Dear Corporate and Government Leaders,

Genetically engineered food ingredients or crops should not be allowed on the market until:

- 1) Independent safety testing demonstrates they have no harmful effects on human health or the environment,
- 2) They are labeled to ensure the consumer's right-to-know, and
- 3) The biotechnology corporations that manufacture them are held responsible for any harm.

If there is nothing to hide, then there is no reason why genetically engineered food products should be labeled. If companies, such as Monsanto and Cargill believe their product is ecologically beneficial they should have no objection to such a decision.

Sincerely

Karla Evans
